

Real estate

Case Study

# Automated & Manual Asset Inventory & Audit

# Project Overview

- Client had zero visibility into IT asset estate across their network
- They were unable to manage, update, identify, or securely manage asset lifecycle and implement inventory controls
- We provided both an automated solution to capture discoverable assets on the network and manually identify and capture assets that were not discoverable
- We provided a BPO service for this under a fixed term

# Key Deliverables

- Installed configured and ran an enterprise asset discovery and management system
- Identified over 110 unique assets, capturing detailed specs and configurations
- Created a database and best practices for ongoing asset management
- Delivered a repeatable process and business continuity outcomes that improved visibility, security and awareness

## Technologies / Tools Used

- LanSweeper for discovery and asset management
- Excel Pivot table exports for deeper team analysis

## Impact / Results

- Created the start point for a full business continuity project
- Immediately reduction in stranded asset maintenance costs of over \$200K
- Brought complete awareness of all assets currently on and accessing the corporate network that were previously unknown
- Improved the client's ability to better and more securely manage the lifecycle of assets
- Identified the need for improved security and access policies
