

Education

Case Study

Carried out manual validation of application

Client Overview

SEAMEO RELC (Regional Language Centre), an organization dedicated to improving language education in Southeast Asia.

Sambaash RELC represents is a private sector EdTech company partnering with an international educational institution. Sambaash itself is a private limited company focused on technology-enabled learning platforms and digital transformation in education

Project Overview

- Clients needed reliable testing to ensure their educational platform functioned correctly for partners and course participants.
- Designed and executed manual test scripts aligned with business functionality.
- Conducted smoke testing for each release cycle and tracked defects using JIRA.
- Reviewed enhancement requests, assessed cross-module impact, and reported findings to the client.
- Work in scope: Quality Assurance – test planning, execution, defect tracking, reporting, and client coordination.

Our solution

- Designed and executed manual test scripts aligned with business functionality.
- Conducted smoke testing for each release cycle and tracked defects using JIRA.
- Reviewed enhancement requests, assessed cross-module impact, and reported findings to the client.

Scope of work

- **Quality Assurance** – test planning, execution, defect tracking, reporting, and client coordination.

Key Deliverables

Main Tasks Completed

- **Designed** manual test scripts based on business functionality.
- **Interacted** with **clients/UAT testers** in Singapore and development teams daily for clarifications and updates.
- **Reviewed** enhancement requests, assessed their impact across modules, and **reported** findings to clients.
- **Conducted** smoke testing for each release cycle.
- **Tracked** defects and **generated** detailed reports.
- **Uploaded** prepared test cases into the master case using JIRA.

Outputs or deliverables provided

- Comprehensive manual test scripts aligned with business requirements.
- Smoke test execution results and defect reports.
- Enhancement impact assessment reports for client review.
- Updated test case repository in JIRA for future reference and reuse.

Technologies / Tools Used

SQL, JAVA

- Developed a scalable and reusable End to End Test Plan document tailored to client requirements

Impact / Results

- **Improved system reliability** by identifying defects early through comprehensive testing, reducing errors in the production environment.
- **Enhanced user satisfaction** by reviewing enhancement requests and ensuring changes did not negatively impact other modules.
- **Streamlined testing processes** with well-documented test scripts and organized JIRA repository, saving time for future releases.
- **Strengthened collaboration** between client and development teams through daily interactions and transparent reporting
